

1987 TURBO ESPRIT

Lotus used the turbocharging technology learned in racing and applied it to the Esprit. Instantly power output was raised to 210 bhp from 2.2 liters. The Turbo Esprit received revised rear suspension and a revised and stronger chassis. A deeper front spoiler and taller spoiler were added to cope with the higher speeds. The Turbo Esprit was capable of 0-60 mph in 6 seconds and 150 mph. Power was raised to 215 bhp in 1986 with Bosch K-Jetronic fuel injection and an increase in compression ratio to 8.0:1.

Specifications:

Engine	2.2 Liter 16 valve four cylinder
Performance	
Top Speed	150 mph
0-60 mph	6.0 seconds
Power	210 bhp @ 7000 rpm
Cooling	Dual front-mounted oil coolers
Transmission	5-speed manual transaxle
Ratios:	1 st - 3.364 2 nd - 2.059 3 rd - 1.381 4 th - 1.037 5 th - 0.756 Rev - 3.546 Final - 3.889

Brake System	Front/rear ventilated discs, ABS
Wheels	BBS
Dimensions:	
Length	165 inches
Height	44.5 inches
Width	73.5 inches
Unladen Weight	2635 lbs
